5 - APP operation interface Introduction:

5.1 - Registered users:

It is possible to register users with mobile phone numbers and mailboxes to save and share the records of sports and health information, and not to record the related information for unregistered or temporary users.

5.2 - Connect the watch:

In the add device, search the device, find the name of the watch device, click and bind the device. Note: if you can't find the device name at this time, check whether the watch has electricity and it is in power on state. If the watch power is turned on, it can't find the device, indicating that the device is binding to other mobile phones. It should be removed from the other mobile phone first, and the Android phone is found in the addition device. To the device name, then the left slide select the delete device, if the use of the apple cell phone, in addition to the APP in the deletion of the device, but also need to find the device name in the Bluetooth settings, click ignore the device, you can connect the new cell phone.

5.3 - Step function:

The number of steps in the APP menu, record the number of steps, calorie, mileage, according to the number of targets set to show the percentage of completion, can distinguish the slow walk, jogging, high speed run and other states, click the menu to enter to view the daily history of the week and month.

5.4 - Sleep function:

In the sleep menu in APP, it begins to automatically detect the sleep state from around 9 p.m., and the action sensor in the watch determines whether the user is in a deep sleep, a shallow sleep or a sober state according to the amplitude of the action of the user's watch.

5.5 - Training function:

It can be convenient for real-time training, record the number of movement, time, calorie, mileage and track, and click the main picture to enter the history of inquiry.

5.6 - Detection function:

The detection menu in APP includes heart rate blood oxygen, blood pressure one key detection and separate single detection, and the watch sends out the test request, will synchronously display in the APP, and also has saved when looking at the history record.

In addition, the heart rate test can also be set in the settings, static, dynamic and separated time test three test modes.

5.7 - About software:

If the APP or the watch firmware is updated, APP will automatically send up the upgrade reminder, and can also enter the menu for manual upgrading. Please pay attention to the use of the restoration factory settings carefully, restoring the factory setting will causes data loss in the APP content settings and the total loss of the watch history data.
